Lucas - Design

Your part: Explain why we chose our solution and how we planned it.

Write 2-3 short bullet points per question in your own words. Use real team examples.

1. **Why did our team choose overhead sensors after comparing different tracking ideas?**
   Think back: What was wrong with people watching, cameras, and animal tags that sensors can fix?

2. **How does our planned sensor arrangement help us tell where a salamander went?**
   Think back: If our prototype lizard moves under our sensors and then turns around, what do the sensors see?

3. **What is one real tunnel condition that influenced our design?**
   Think back: Why did our shopping list include parts to keep the sensors dry?
