Noah - Create

Your part: Explain how we built the physical tunnel model.

Write 2-3 short bullet points per question in your own words. Use real team examples.

1. **Which parts of our tunnel model would you point out to someone seeing it for the first time?**
   Think back: Where are the walls, the floor, and the places that hold the sensors on our model?

2. **What is one building step you helped with or watched closely?**
   Think back: Which parts did you put together, or which teammate did you help?

3. **How does one feature of our model help us practise what happens in the real Stouffville Road tunnel?**
   Think back: How does the tunnel shape or the gravel floor match what we saw on our visit?
