Victor - Create

Your part: Explain how the M5Stack, sensors, and code make our prototype work.

Write 2-3 short bullet points per question in your own words. Use real team examples.

1. **How do one of our sensors and the M5Stack work together?**
   Think back: When a sensor notices the prototype lizard, what does the M5Stack show?

2. **What is one rule we programmed or tried to program for the prototype?**
   Think back: Can you finish this rule: "IF an animal passes the sensor, THEN the screen..."?

3. **What can you demonstrate with our prototype lizard to show what our prototype does today?**
   Think back: When you move the prototype lizard under the sensor, what happens on the screen?
